✓ Summary

Backend Engineer (Entry-level) with practical experience building production-ready **APIs** and backend systems using **Java**, **Spring Boot**, and **relational databases**. Skilled in designing scalable architectures, integrating third-party services, and optimizing performance. Familiar with **Docker**, **AWS**, and **CI/CD** workflows. Strong problem-solving mindset with a focus on **clean, maintainable code**. Looking to contribute to impactful backend systems while growing in high-scale engineering environments.

📅 Education

B.Sc. - Physics at The New College | May 2025 | Chennai Tamil Nadu India | **Academic project:** Troubleshooting lab equipment and analysing experimental data.

🔄 Certificates

AWS Certified Cloud Practitioner at AWS. | **AWS Cloud Technical Essentials** at edX.

💎 Skills

Cloud Platforms: AWS (EC2, ECS, S3, IAM, Lambda, DynamoDB, CloudFront, CloudWatch, Secrets Manager) | **DevOps & Automation:** Docker, Kubernetes, Terraform, GitHub Actions, CI/CD Pipelines, Infrastructure as Code | **Programming & Databases:** Python, Go, Django, SQL, NoSQL (DynamoDB) | **Networking & Security:** VPC, Subnets, Security Groups, IAM Roles & Policies, Cloud Networking, Least-Privilege Access | **Other Tools & Concepts:** Linux Basics, Monitoring & Alerts, Service Discovery, DevOps Best Practices | **Soft Skills:** Team Leadership, Analytical Thinking, Problem Solving, Communication, Adaptability, Resilience.

💻 Projects

Autonomous Insurance Claims Processing Agent | MAY 2026 https://github.com/sanjay036912-oss/Insurance_Agent

- Built a **Python** pipeline that extracts 15+ structured fields from fillable **ACORD PDF** forms, validates mandatory fields, classifies claims, and routes them automatically (**Fast-track** / **Manual Review** / **Specialist Queue** / **Investigation Flag**). **Solved** a critical PDF **extraction** gap by replacing standard text parsing with **PyMuPDF's** `page.widgets()` API to read form field annotations directly — conventional extractors returned empty strings on fillable PDFs. **Designed** a **regex** extraction engine with negation handling and **LLaMA 3 (Ollama)** as a local **LLM** fallback for edge-case fields; achieved zero missing fields on well-formed **ACORD** documents. Implemented a 5-rule priority routing engine including fraud keyword detection, injury classification, and a \$25,000 damage threshold for fast-tracking claims. | **Tech Stack:** Python · PyMuPDF · Regex · Ollama (LLaMA 3) · JSON.

Video Streaming App — Go + PostgreSQL | APR 2026 <https://github.com/sanjay036912-oss/Video-Uploading-App>

- Built a full-stack video upload and streaming platform using **Go (Golang)** backend with **PostgreSQL** for metadata storage and a **Vanilla JavaScript** frontend for in-browser playback. Designed **RESTful API** endpoints in Go to handle video upload, **streaming**, and **deletion**, with local file system **storage** and **clean** separation between **backend** and **frontend**. Implemented responsive **UI** with **upload**, **play**, and **delete** functionality; planned future enhancements including **AWS S3** cloud storage, authentication, and React frontend migration. | **Tech Stack:** Go · PostgreSQL · HTML · CSS · JavaScript

Spiderman Flappy Bird Game — Python · Pygame | APR 2026 <https://github.com/sanjay036912-oss/Spidey-Flappy-bird>

- Built a Flappy Bird clone with a **Spiderman** theme using Python and **Pygame**, featuring **dynamic pipe obstacles**, **rotation physics**, **score tracking**, **sound effects**, and a **restart** system. | **Tech Stack:** Python · Pygame

📄 **Language** | Tamil(native), English (fluent) | **LinkedIn** www.linkedin.com/in/sanjay-g-a7384424b
